

Lab Assignment 10

3-address code

Intermediate representation(s)/ generating Intermediate representation(s)

Deadline is 25 October 2019

Consider the context-free-grammar of **assignment 7**. Write semantic actions (SDD/SDT) to generate **3-address code** for a fragment of the language within **global** without any function. Consider the following constructs only: **read**, **print**, **assignment**, **if** and **while** statements, expressions with integers and its operations; relational and Boolean operators. Implement your solution. The output should be **3-address code** of the input program in a readable form.
